Thinsy Corporation Announces EnSpeed VMM with LiveSync, a Xen based VMM with Peer-To-Peer Disk Sync Alternative to SAN Storage

Saratoga, California – November 9, 2007 – Thinsy Corporation today announced the immediate availability of EnSpeed VMM with LiveSync, a Xen based Virtualization Server that uses Peer-To-Peer disk synchronization technology to eliminate the need for SAN or NAS external storage. This Peer-To-Peer storage technology enables Enterprise Grade features such as

1. High Availability Backup VM Server with Automatic Failover in case of Primary VM Server hardware failure
2. Live Migration of Virtual Machines from Primary to Backup VM Server for performing maintenance on the Primary VM Server
3. Full and Incremental backup of VM without the need to power off the VM
4. Snapshots of VM Virtual Disk images, performed on a per VM basis, not on a per VM Server Filesystem or VM Server Volume basis.

The EnSpeed LiveSync technology is also compatible with other standard Linux distributions such as RedHat 5.0 and CentOS 5.0. LiveSync may be installed as an rpm on these systems.

In addition to the EnSpeed VMM with LiveSync, Thinsy Corporation also announced the availability of the EnSpeed VM Orchestrator, a Virtual Machine Management Server that provides an intuitive web browser GUI for managing LiveSync VM Servers.

EnSpeed VM Orchestrator includes the following functions:

1. Browse, download and store Xen Virtual Appliances
2. Create and Deploy Virtual Machines from stored Xen Virtual Appliance Images
3. Create and Deploy Virtual Machines using ISO images stored in the ISO Library
4. Configure Virtual Machines for High Availability with Automatic Failover
5. Basic VM Control Operations such as Power On/Power Off, Remote Console.

For additional information on EnSpeed VMM with LiveSync, please visit
